## Year 12 Maths - Pure and Mechanics Teacher

| Topic |  | Ref | Ex |
| :---: | :---: | :---: | :---: |
| Quadratics | Solving Quadratic Equations <br> - By factorising <br> - Using the formula <br> - By completing the square <br> - Using the calculator function <br> - Find and interpret the discriminant of a quadratic expression <br> - Solving equations that can be transformed into a quadratic using a substitution. | P2.3 | $\begin{aligned} & \hline \text { P2A } \\ & \text { P2B } \\ & \text { P2C } \\ & \text { P2D } \\ & \text { P2E } \\ & \text { P2F } \end{aligned}$ |
|  | Quadratic Graphs <br> - Write a quadratic in completed square form. Use this form to identify the vertex of a quadratic and to sketch the curve. | P2.3 | P2D |
|  | Modelling with Quadratics <br> - Use and apply models that involve quadratic functions | P2.3 | P2F |
| Simultaneous Equations | Linear Simultaneous Equations <br> - Solve linear simultaneous equations using elimination or substitution. Interpretation as finding point of intersection of straight lines. | P2.4 | P3A |
|  | One Linear, One Quadratic <br> - Solving a pair of simultaneous equations involving one linear and one quadratic equation. <br> - Use of discriminant to solve problems involving the intersection of a straight line and a quadratic graph. <br> - Interpret algebraic solutions graphically. | P2.4 | $\begin{aligned} & \text { P3B } \\ & \text { P3C } \end{aligned}$ |
| Inequalities | Linear Inequalities <br> Solution of linear inequalities, including brackets, fractions and negative numbers <br> - Represent solutions on a number line | P2.5 | $\begin{aligned} & \text { P3D } \\ & \text { P3F } \end{aligned}$ |
|  | Quadratic Inequalities <br> - Solution of quadratic inequalities, including those with $x$ in the denominator of a fraction. | P2.5 | P3E |
|  | Set Notation <br> - Express solutions through the correct use of 'and' and 'or', or through set notation e.g. $\{x: a<x\} \cap\{x: x<b\}$ | P2.5 | $\begin{aligned} & \text { P3D } \\ & \text { P3E } \end{aligned}$ |
|  | Inequalities on Graphs <br> - Represent linear and quadratic inequalities graphically by shading regions | P2.5 | $\begin{aligned} & \hline \text { P3F } \\ & \text { P3G } \end{aligned}$ |
| Graphs and Transformations | Important Graphs <br> Know the shape of be able to sketch the following graphs: <br> - Cubic graphs <br> - Quartic graphs <br> - Reciprocal graphs of the form $y=a / x$ and $y=a / x^{2}$ | P2.7 | $\begin{aligned} & \text { P4A } \\ & \text { P4B } \\ & \text { P4D } \end{aligned}$ |
|  | Solutions to Equations <br> - Use intersection points of graphs to solve equations. <br> - Interpret algebraic solution of equations graphically | P2.7 | P4A P4B P4D |

## Year 12 Maths - Pure and Mechanics Teacher

| Topic |  | Ref | Ex |
| :---: | :---: | :---: | :---: |
| Graphs and Transformations (cont.) | Transformations of Graphs <br> - Understand the effect of simple transformations on the graph of $y=\mathrm{f}(x)$ including sketching the associated graphs. <br> - Transformations will be of the form: $y=a \mathrm{f}(x), y=\mathrm{f}(x)+a, y=\mathrm{f}(x+a), y=\mathrm{f}(a x)$, where $a$ is a constant. <br> - Be able to express the transformations involved in terms of translations, reflections and stretches. | P2.8 | $\begin{aligned} & \hline \text { P4E } \\ & \text { P4F } \end{aligned}$ |
| Quantities and Units in Mechanics | Language of Kinematics <br> - understand the concept of a mathematical model, and be able to abstract from a real-world situation to a mathematical description (model); <br> - know the language used to describe simplifying assumptions; <br> - understand the particle model; <br> - be familiar with the basic terminology for mechanics; <br> - be familiar with commonly-made assumptions when using these models; <br> - understand and use fundamental quantities and units in the S.I. system: length, time and mass; <br> - Understand that units behave in the same way as algebraic quantities, e.g. meters per second is $\mathrm{m} / \mathrm{s}=\mathrm{m} \times 1 / \mathrm{s}=\mathrm{ms}-1$ | A6. 1 | A8A <br> A8B <br> A8C <br> A8D |
| Kinematics Graphs (constant acceleration) | - Understand and use the language of kinematics: position; displacement; distance travelled; velocity; speed; acceleration. <br> - Understand, use and interpret graphs in kinematics for motion in a straight line: <br> - displacement against time and interpretation of gradient <br> - velocity against time and interpretation of gradient and area under the graph | A7.1 | $\begin{aligned} & \text { A9A } \\ & \text { A9B } \end{aligned}$ |
| Assessment 1 |  |  |  |
| Coordinate Geometry Straight Lines | Straight lines <br> - Calculate the gradient of a line joining a pair of points. <br> - Find the equation of a straight line given (i) a gradient and a point or (ii) two points <br> - Understand and use the equation of a straight line including the forms: $y-y_{1}=m\left(x-x_{1}\right) \text { and } a x+b y+c=0$ <br> - Find the length and midpoint of a line segment given the coordinates of its endpoints. <br> - Equations of parallel and perpendicular lines <br> - Use straight line graphs to construct mathematical models | P3. 1 | P5A P5B P5C P5D P5E P5F P5G P5H |

## Year 12 Maths - Pure and Mechanics Teacher

| Topic |  | Ref | Ex |
| :---: | :---: | :---: | :---: |
| Coordinate Geometry Circles | Equation of a circle <br> - Know how to find the equation of a circle in the form: $(x-a)^{2}+(y-b)^{2}=r^{2}$ <br> - use the equation of a circle in expanded form $x^{2}+y^{2}+2 g x+2 f y+c=0$ and identify the centre and radius of the circle by completing the square | P3.2 | $\begin{aligned} & \text { P6A } \\ & \text { P6B } \end{aligned}$ |
|  | Problems involving circles <br> - Solve problems involving circles, tangents and straight lines. <br> - Know the following circle properties: the angle in a semicircle is a right angle; the perpendicular from the centre to a chord bisects the chord; the perpendicularity of radius and tangent. Use these to help solve problems involving circles. | P3.2 | $\begin{aligned} & \text { P6C } \\ & \text { P6D } \\ & \text { P6E } \\ & \text { P6F } \end{aligned}$ |
| Kinematics Equations (constant acceleration) | SUVAT Equations <br> - Understand and derive the formulae for constant acceleration for motion in a straight line SUVAT <br> - Recognise when it is appropriate to use the SUVAT formulae for constant acceleration <br> - Solve kinematics problems using constant acceleration formulae <br> - Understand and use weight and motion in a straight line under gravity; gravitational acceleration, $g$, and its value in S.I. units to varying degrees of accuracy <br> - Solve problems involving vertical motion under gravity. | $\begin{aligned} & \text { A7.2 } \\ & \text { A7.3 } \end{aligned}$ | $\begin{array}{\|l\|} \hline \text { A9C } \\ \text { A9D } \\ \text { A9E } \end{array}$ |
| Assessment 2 |  |  |  |
| Vectors in 2D | Definitions and arithmetic operations <br> - Use vectors in two-dimensions in column vector form and $\mathbf{i}, \mathbf{j}$ unit vector form. <br> - Calculate the magnitude and direction of a vector <br> - Convert between component form and magnitude/direction form. <br> - Add vectors diagrammatically and perform the algebraic operations of vector addition and multiplication by scalars, and understand their geometrical interpretations. | $\begin{aligned} & \hline \text { P9.1 } \\ & \text { P9. } 2 \\ & \text { P9.3 } \end{aligned}$ | $\begin{array}{\|l} \hline \text { P11A } \\ \text { P11B } \\ \text { P11C } \end{array}$ |
|  | Position vectors and modelling with vectors <br> - Understand and be able to use position vectors, know that $\overrightarrow{A B}=b-a$ <br> - Calculate the distance between two points represented by position vectors <br> - Find the position vector of a point C dividing AB in a given ratio <br> - Use familiar shapes to illustrate the difference between 2 vectors and vector addition, e.g. parallelogram, rectangle. <br> - Use vectors to solve problems in context including speed and distance calculations | $\begin{aligned} & \text { P9. } 4 \\ & \text { P9. } \end{aligned}$ | $\begin{array}{\|l} \hline \text { P11D } \\ \text { P11E } \\ \text { P11F } \end{array}$ |

## Year 12 Maths - Pure and Mechanics Teacher

| Topic |  | Ref | Ex |
| :---: | :---: | :---: | :---: |
| Integration | Indefinite Integrals <br> - Understand integration as the reverse process of differentiation <br> - be able to integrate $x^{n}$ (excluding $\mathrm{n}=-1$ ), and related sums, differences and constant multiples <br> - Understand the need for +C <br> - Given $\mathrm{f}^{\prime}(x)$ and a point on the curve, find an equation of the curve in the form $y=\mathrm{f}(x)$. | $\begin{aligned} & \hline \text { P8.1 } \\ & \text { P8.2 } \end{aligned}$ | $\begin{aligned} & \hline \text { P13A } \\ & \text { P13B } \\ & \text { P13C } \end{aligned}$ |
|  | Definite Integrals <br> - Be able to evaluate definite integrals using correct notation <br> - Use a definite integral to find the area bounded by a curve and the $x$-axis <br> - Find areas bounded by curves and straight lines | P8.3 | $\begin{aligned} & \hline \text { P13D } \\ & \text { P13E } \\ & \text { P13F } \\ & \text { P13G } \end{aligned}$ |
| Forces and Newton's Laws | Newton's Second Law <br> - Understand and use Newton's second law F = ma for motion in a straight line (no resolving forces) <br> - Solve problems involving motion in a straight line with constant acceleration in vector form, where the forces are given in $\mathbf{i}, \mathbf{j}$ form or as column vectors | A8. 2 | $\begin{aligned} & \text { A10A } \\ & \text { A10B } \end{aligned}$ |
|  | Newton's Third Law <br> - Understand and use Newton's third law; equilibrium of forces on a particle and motion in a straight line; <br> - Solve problems involving connected particles which can be considered as a whole system or separate parts. <br> - Solve problems involving smooth pulleys. | A8.4 | A10C <br> A10D <br> A10E <br> A10F |
| Assessment 3 |  |  |  |

## Year 12 Maths - Pure and Mechanics Teacher

| Topic |  | Ref | Ex |
| :---: | :---: | :---: | :---: |
| Kinematics 2 (Variable acceleration) | Determine Rates of Change for kinematics <br> - Understand that displacement, velocity and acceleration may be given as functions of time <br> - Use calculus (differentiation) in kinematics to model motion in a straight line for a particle moving with variable acceleration; <br> - Understand that gradients of the relevant graphs link to rates of change; <br> - Know how to find max and min velocities by considering zero gradients and understand how this links with the actual motion (i.e. acceleration $=0$ ). | A7.4 | A11A <br> A11B <br> A11C |
|  | Use of Integration for Kinematics problems <br> - Use calculus (integration) in kinematics to model motion in a straight line for a particle moving under the action of a variable force; <br> - Understand that the area under a graph is the integral, which leads to a physical quantity; <br> - Know how to use initial conditions to calculate the constant of integration and refer back to the problem. | A7.4 | A11D |
|  | Constant Acceleration Formulae <br> - Use calculus to derive the constant acceleration formulae | A7.4 | A11E |
| Exponentials and Logarithms | Exponential Functions <br> - Sketch graphs of the form $y=a^{x}$ and $y=e^{x}$, and transformations of these graphs. $(a>0)$ <br> - Understand the difference in shape between $\mathrm{a}>1$ and $\mathrm{a}<1$. <br> - Know that the gradient of $\mathrm{e}^{\mathrm{kx}}$ is equal to $k e^{\mathrm{kx}}$ and hence understand why the exponential model is suitable in many applications <br> - Use and interpret models that use exponential functions - exponential growth and decay. | $\begin{aligned} & \hline \text { P6.1 } \\ & \text { P6.2 } \\ & \text { P6.7 } \end{aligned}$ | $\begin{array}{\|l\|} \hline \text { P14A } \\ \text { P14B } \\ \text { P14C } \end{array}$ |
| Exponentials and Logarithms (cont.) | Logarithms <br> - Know and be able to use the definition of $\log _{a} n=x$ as equivalent to $\mathrm{a}^{\mathrm{x}}=\mathrm{n}$, where a is positive and $x \geq 0$ <br> - Understand and use the laws of logarithms <br> - Solve equations of the form $a^{x}=b$ <br> - Know and be able to use the natural logarithm function In $x$ and its graph <br> - Use logarithms to estimate the values of constants in non-linear models of the form $y=a x^{n}$ and $y=k b^{x}$, given data for x and y | $\begin{aligned} & \text { P6.3 } \\ & \text { P6.4 } \\ & \text { P6.5 } \\ & \text { P6.6 } \end{aligned}$ | $\begin{aligned} & \text { P14D } \\ & \text { P14E } \\ & \text { P14F } \\ & \text { P14G } \\ & \text { P14H } \end{aligned}$ |
|  | Assessment 4 |  |  |
